Doct John Torrey

Sir

The enclosed plant I found to day on the bank of Lake Ontario. It grows on dry sandy soil about 2 feet high. It is evidently a Lathyrus but what the species is I cannot learn —

Being engaged as an engineer on the Erie Canal I have an opportunity of seeing a variety of plants. If it should be your wish I will furnish you with any that may appear new with a view of Receiving in return your remarks — Please excuse this freedom in a stranger — Very Respectfully Your

Humble Servt

Charles F. Wingfield

Dear Sir

Your polite letter of the 22. reached me several days ago. I am satisfied that your remarks on the Salicyna is correct that the plants which compose that Genus have not been well described & indeed I think it will apply to many Specific descriptions. Improvements of this Kind would render botany a more interesting Science and I am gratified to learn that you are about to engage in the cause.

I have a number of botanical friends in this quarter and if you will send me your prospectus & subscription paper I will do all I can to aid you in your undertaking. — I inclose you 2 Species of Tillæa which grow near lake ontario on stagnant water neither of which appear to be described in any of the works in my possession. I likewise send you a list of several other plants growing near the same place and can procure lists of those which have been examined by the Botanists in this quarter any of which I will ~~send~~ forward at your request & will add remarks if it would comport with the

plan of your publication)

Please to let me hear from you when convenient

With my best wishes for your success I am

Very Respectfully Your friend

Chas. F. Phipps
